EXCLUSIVE INTRODUCTION
Stewart Bartlett
New Blight Resistant Pear

TO OUR MANY FRIENDS, A MESSAGE FROM

Peter Van Well,

President, Van Well Nursery

VAN WELL NURSERY, INC.

Specializing in Quality Fruit Trees

P. O. BOX 858
1000 N. MILLER STREET
WENATCHEE, WASHINGTON
PHONE NORMANDY 3-5761

Dear Friends:

This new catalog contains news of two new varieties which we are introducing this season -- the Stewart blight resistant Bartlett pear and the Early Red Haven peach. I know you will be interested in them as they are definite improvements in their line or variety.

Our testing and research program is constantly evaluating many new varieties and rootstocks as well as new nursery methods and practices. We are very pleased to see the tangible results of this work in the new varieties which we introduce.

This season our new introductions, the Stewart Bartlett Pear and Early Red Haven peach, are substantial improvements and we sincerely feel they merit the attention of commercial orchardists in all fruit growing areas of this county.

If you would like more information concerning our nursery, fruit strains and varieties offered or have special planting problems, please write to me personally.

Sincerely yours,

Peter Van Well

Joseph Van Well (left), Production Manager, and Jack Van Well, Sales Manager, are pictured here in one of the Van Well Nursery blocks near Wenatchee.

USUAL DISTANCES FOR PLANTING

Almonds, Apricots, Filberts, Nectarines, Peaches, Pears, Plums, Prunes, and Sour Cherries—20 to 35 feet . . . Apples and Sweet Cherries—20 to 40 feet . . . Grapes, Boysenberry, Dewberry, Loganberry, and Youngberry—6 feet in row; 5 to 6 feet between rows . . . Blackberries and Raspberries—2½ feet in row; 5 to 6 feet between rows . . . Strawberries—Field culture: 1 to 1½ by 2½ feet. Garden culture: 1 to 2 feet.

LOCATION

The office and warehouse of Van Well Nursery is located at 1000 No. Miller Street, Wenatchee, Washington.

Our Nile growing ground, which contains our scion orchard, experimental plots and nursery fields, is located on South East Second Street in East Wenatchee.

Our Columbia Basin growing grounds are located on State Highway 10, four miles west of Quincy, Washington. Here in the new soil of the famous Columbia Basin project is located our principal fruit tree growing area.

GUARANTEE

We guarantee all nursery stock sold by us to be true to name. If any stock sold by us shall prove untrue to name we will replace free or refund purchase price, at the option of the purchaser.

We guarantee our trees to be in first class, live condition when they leave our packing house. Due to conditions beyond our control, soil, weather, etc., we cannot guarantee growth. We will, however, replace any trees that fail to live, at one-half of the original purchase price. All complaints for failure of trees to grow must be made in writing within six months of the date of delivery.

MINIMUM ORDER

We cannot accept orders for less than \$2.00.

SALES TAX

Residents of the State of Washington please add 4% Sales Tax when ordering Nursery Supplies and Non-Commercial Fruit Trees. No tax necessary on Commercial Fruit Trees.

SHIPPING

Our shipping season is from November 16 to June 1. All orders received after June 1 will be held until the following fall.

We pay postage on all **Non-Commercial** Orders to any point in the United States.

We pay all shipping charges (except Nursery Supplies) on Commercial Orders (over 25 trees) of \$10.00 or more to all points in Washington. Orders to other points are F.O.B. Wenatchee.

FRUIT TREE PRICES BASED ON TOTAL QUANTITY

All Fruit Trees in an order take the same quantity price. Example, a total of 25 assorted apple, peach and pear take "25 rate".

FOREIGN SHIPMENTS

There will be a service charge of \$10.00 on all shipments outside the United States for the special work necessary in processing these orders.

WELLSPUR* DELICIOUS

Newest and Finest

SPUR TYPE DELICIOUS

Early Solid Red Color

Fruit Spur Type Tree

Naturally Semi-Dwarf

*Trade Mark Registered

THE WELLSPUR DELICIOUS is a new and different Red Delicious. It was discovered on the Wells & Wade Fruit Co. ranch at Azwell, Washington. The original trees are now approximately 12 years old.

The apples appear to be a mutation of the Starking Delicious. The fruit is Delicious typed, however, the tree is a spur type, semi-dwarf with fruit that colors with a solid red blush and practically all extra fancy in color.

Because the tree is a spur type structure, and is a smaller size (approximately $\frac{2}{3}$ to $\frac{3}{4}$ size of a standard tree) it insures heavy and early bearing, ease in picking and spraying, and less pruning. It is believed that the spur type Delicious will produce 25% more fruit per acre because it can justify a close permanent planting. The apple achieves an overall red color.

The Wellspur also appears to be comparatively winter hardy, withstanding the 1955 freeze with little damage while other trees around the original Wellspur trees were severely damaged.

**MORE
COLOR**

**HEAVY
BEARER**

**LARGE
SIZE**

THIS NEW RED ROME was discovered in the George Barkley orchard in Manson.

The fruit of the Barkley Red Rome has consistently shown better color and size than other Red Romes in his orchard, and orchards in the same area. The apples start coloring with a stripe and gradually fill in until they are fully colored. The stripes remain prominent even after the fruit has attained full color. The shape of the Barkley Red Rome tends to be longer than Rome Beauty or other red Romes. Tree structure and ability to bear are very similar to the Rome Beauty.

Mr. Barkley has 23 trees of third generation producing plus the original sport limb. These trees produced a total crop of 548 packed boxes of fruit. The inspection certificate issued jointly by the U.S.D.A. and the Washington State Department of Agriculture on the pack out of this crop showed that the apples were mostly 90% to 100% good red, thus showing it does have exceptional coloring qualities.

RED KING Delicious
(Brauns Delicious).

Here Is What Growers Say About RED KING DELICIOUS

"We operate an 80-acre orchard at Monitor, Wash., which is just coming into bearing. A large portion of this acreage is planted to Red Delicious. Three years ago we top worked a few of these trees to RED KING Delicious. We picked 600 boxes of RED KING Delicious from these grafted trees this fall and they were picked and shipped by September 5, and sold for \$5.25 per box. They really color early. Had the entire orchard been RED KING Delicious, even with the small tonnage we are yet producing, we could have realized several thousand dollars more from our 1958 crop."

J. T. ORCHARDS

MEDINA, NEW YORK

"... I want to say that all 149 Red King Del. received a year ago are growing beautifully."

FRONT ROYAL, VIRGINIA

"The 25 Red King trees I bought from you arrived and they are, without exception, the most beautiful trees I have ever seen come from a nursery ... Good Luck to you, an honest man who provides something really exceptional."

CLARKSTON, WASHINGTON

"Received the trees yesterday and thanks a lot. They are the best trees I have ever planted. I am certainly getting more, if possible, before the end of shipping season this spring."

Best-Plant Red King

PROVEN THROUGH FIVE GENERATIONS

RED KING* Brauns Delicious of third, fourth and fifth generations are now producing in most fruit growing areas of the United States and many foreign countries. The beautiful early-coloring fruits continue to show the same remarkable color characteristics found on the original sport limb.

The original limb is located on the low side of a Starking variety tree in the Barker Orchard at Riverside, Washington, and after fifteen years is still producing apples which color at least two weeks ahead of the other fruit on the same tree.

Van Well Nursery has paid \$35,000.00 for one limb of Red King (Brauns Delicious). From this original limb sport have been propagated thousands of trees of this new early coloring Delicious. These trees, which are now bearing fruit in almost every fruit growing area, show the excellent early coloring ability that has made Red King the champion of the new Red Delicious Super Sports.

SUPERIOR FLAVOR

The old fashioned flavor of Common Delicious has been inherited by RED KING* Brauns Delicious. Sweet and juicy, crisp and mild, this is an apple that is truly Delicious.

EXCELLENT KEEPER

Storage tests show that RED KING* Brauns Delicious is a very superior keeper. Apples of this wonderful new variety have been held in storage until late May with no break-down.

SPORT

VAN WELL'S *Quality* APPLE TREES

Our quality apple trees are grown in the heart of the Wenatchee Valley, one of the most famous apple producing areas of the world. We are able to select our strains from the finest trees in the area which have long records of high production and quality fruit. Our trees are grown in virgin soil, a light fertile loam which produces exceptionally good roots. Extreme care is given to bud-wood selection to achieve the purest strains of nursery stock available.

These factors and our years of experience and know-how combined with the most modern production methods enables us to furnish our customers with the finest trees available anywhere.

For Dwarf and Semi-Dwarf Trees See Pages 12, 13 and 14

SUMMER APPLES

✓ **LODI** — Improved Yellow Transparent, yellow color.

✓ **EARLY McINTOSH** — Large fruit, crimson color, juicy white flesh.

✓ **BEACON** — A new hardy variety. Skin dark red, striped. Excellent for pie and sauce.

✓ **YELLOW TRANSPARENT** — Crisp white flesh. Excellent for pies and apple sauce.

FALL APPLES

✓ **RED GRAVENSTEIN** — Improved red strain of old favorite cooking apple. Crisp white flesh is tender and juicy with high flavor.

✓ **RED McINTOSH** — Early coloring fruit, solid red skin, crisp and juicy with distinctive flavor. Tree is hardy and productive.

WINTER APPLES

✓ **VALNUR® DOUBLE RED JONATHAN** — VALnur Double Red Jonathan is a mutation of Jonathan. The fruit starts coloring with a stripe and fills in until the entire apple is completely covered with a beautiful deep red. Earlier and better colored than its parents, but it still has the typical Jonathan flavor and quality.

✓ **RED KING, BRAUNS VARIETY DELICIOUS** — U. S. Plant Patent No. 1411. See complete description and prices on pages 6 and 7.

✓ **SPUR TYPE RED DELICIOUS** — See WELL-SPUR DELICIOUS on page 4 for complete description and prices.

✓ **BARKLEY RED ROME** — U. S. Plant Patent No. 1470. See complete description and prices on page 5.

✓ **RED ROME** — Improved budsport of Rome Beauty. Solid, deep, brilliant, red color.

✓ **YELLOW DELICIOUS** — Produces large golden fruit with exceptional flavor. Bears early and is a heavy bearer. Excellent pollenizer. A leading commercial variety. See illustration.

Yellow Delicious

VAN WELL RED WINESAP

Originated in the orchard of Al Ruble in East Wenatchee, it is a fine quality apple much improved over the old black Winesap. Colors with a stripe to a beautiful dark red. The fruit has exceptionally good keeping qualities. It is a prolific bearer, producing large size apples. Many fruit growers tell us that this is the best of all Red Winesaps. Introduced and sold only by Van Well Nursery.

Also Available on fast bearing Dwarf and Semi-Dwarf trees

Hardy Apple Understock

Due to the recent demand by growers in northern areas for hardy freeze-resistant understocks, we are now growing several varieties. The varieties listed below are the ones that showed least damage in the disastrous freeze which struck the Pacific Northwest in November, 1955.

ANTONOVKA

BEACON

EARLY McINTOSH

YELLOW TRANSPARENT

(See Standard Variety Price List)

HENDERSONVILLE, NORTH CAROLINA

"The trees were in good shape. We like them very well . . . Please send me information about the roots you use, they are the best ones I have ever seen."

NEW BUFFALO, MICHIGAN

"Trees arrived in perfect shape—nicest trees I have seen in a long time."

EXCLUSIVE INTRODUCTION:

Blight Resistant

Stewart Bartlett

Plant Patent Applied For
Sold Only By VAN WELL NURSERY

THE Stewart Bartlett is the sensational new Blight Resistant Bartlett strain discovery which, according to a Wenatchee Tree Fruit Experiment Station research report, "should be considered for replacing completely (fire blight) susceptible Bartlett."

A sport of Bartlett, the Stewart strain has been subjected to severe testing at the Tree Fruit Experiment Station, Wenatchee, The most potent blight bacteria available was inoculated into standard Bartlett and the new Stewart strain. The research report stated: "We obtained rapidly moving infection on standard Bartletts and in reduced extent on the Stewart strain. Most of the lesions on the Stewart strain died in the fruit podical. One invaded the fruit and eventually into the wood, dying about one foot from the place of infection."

Fruit from the Stewart strain seems to be identical to Standard Bartlett in shape, color, flavor and texture.

Genuine Stewart Bartlett strain
BLIGHT RESISTANT Pear Trees
Sold Only By VAN WELL NURSERY
Not GENUINE without this signature

Howard M Stewart

Wenatchee fruit grower, Howard Stewart, is shown here with the sport limb of a Bartlett tree that has shown blight resistant characteristics. The new strain of Bartlett has undergone vigorous testing at the Tree Fruit Experiment Station and the conclusions indicated that the strain resists spread of blight infection through the wood. Stock will be available in limited supply by Van Well Nursery. For this season, we must limit each customer to not over 100 trees.

PEARS

Van Well pear trees are grown in light loam soil, and are irrigated by overhead sprinklers. We feel that these conditions enable us to grow pear trees with more uniform and fibrous root systems. Many growers tell us that our pear trees have the finest root systems they have ever seen.

If you are planting pear trees, we suggest that you give us a trial order. We know you will be satisfied.

✓ **BARTLETT** — One of the leading commercial varieties, an excellent canning pear. The skin is light yellow with a red blush. The large fruit has a smooth and attractive appearance. The tree structure is somewhat upright.

✓ **MAX-RED BARTLETT** (Plant Patent No. 741) — A red sport of Bartlett with all of the qualities of its parent plus an attractive red color. The flesh is the same color as Bartlett, as the red color does not carry through the skin. This pear has more sugar content than Bartlett, but in most respects is similar to it.

✓ **ANJOU** — A leading commercial variety in the Pacific Northwest. The fruit is large, round, firm and has very good keeping qualities. The flesh is sweet and juicy. The tree structure is large.

✓ **FLEMISH BEAUTY** — Large, red blush, heavy bearer.

✓ **COMICE** — Dessert pear, buttery, juicy, sweet.

✓ **SECKEL** — Sweet, juicy, brown with red cheek.

✓ **BOSC** — Large, cinnamon russet, long neck. High quality.

✓ **FORELLE** — Long keeper, fine for table decoration, lasts all winter.

✓ **OLD HOME** — A hardy and blight resistant tree, principally used for understock.

✓ **PACKHAM TRIUMPH** — Bartlett pear type ripens about a week later. Excellent pollinizer for Bartlett.

BLIGHT RESISTANT BARTLETT — See STEWART PEAR on page 10 for complete description and prices.

Quality Dwarf Apple Trees Avail

APPLES ON E. M. IX

Trees propagated on East Malling IX rootstocks bear especially early. These trees will produce high yields before standard trees even start to bear.

Full dwarf trees on E. M. IX are now proving their potential in many commercial orchards. Profitable crops are being picked in the third growing season.

The recommended planting distance is 6x15 feet, which requires approximately 450 trees per acre. However, when you consider that you can pick as much fruit when the tree is 4 or 5 years old, as you could from a 10 to 12 year old orchard on standard trees, you feel the extra cost might be desirable.

The savings you would make in picking, spraying, thinning, pruning and other orchard operations would probably offset the extra cost to start the orchard. The quality of the fruit would be superior because you would have sunlight throughout the tree, thereby assuring practically all extra fancy fruit.

Our own dwarf and semi-dwarf orchards in East Wenatchee are visited every year by hundreds of growers who want to see with their own eyes how practical these little trees are.

If you want top production in the shortest time possible write us today for your trees on East Malling IX rootstock— don't delay, supplies are limited.

For more information concerning any of the trees on E. M. IX, II or VII please write direct to Peter Van Well.

CRAB APPLES ON
E. MALLING IX
Transcendent
Hyslop

able on Genuine E. Malling Roots

APPLES ON E. M. VII ROOTS

Trees on Malling VII are well adapted to almost any type of soil. Generally they do not require staking, however, under some soil and wind conditions staking may be necessary, at least for the first 3 or 4 years of the life of the tree.

These trees grow to maturity at about one-half the size of standard trees under the same conditions. Trees on heavy, fertile soil will obtain larger size than those on lighter soil. This is also true of standard trees. (On extremely light soil it might be advisable to use trees on Malling II rootstocks in order to obtain desired size at maturity.

A 5 to 6-year-old orchard can produce 1000 bushels per acre. With the high cost of production, especially labor, you will want to keep your trees close to the ground. Imagine picking a 1000 bushel per acre crop from 6 to 8 foot ladders! With these smaller trees, your fruit will be of much better quality and color, too.

We recommend 20 by 20 foot planting on lighter soils and 25 by 25 foot on the better soils for your permanent setting. These trees start to bear at a young age and to get volume production per acre in the shortest possible

POSTPAID PRICES

Standard Varieties on E.M. II,

See Enclosed List

time, we suggest planting 10 by 20 foot on lighter soils, and 12½ by 25 foot on the heavier soils, with the intention of spacing to 20 by 20 and 25 by 25 feet respectively when the trees start to crowd.

The wide spacing one way will provide ample room for spraying, harvesting, etc.

APPLE VARIETIES AVAILABLE ON E. M. VII (SMALL SEMI-DWARF)

RED GRAVENSTEIN — Improved red strain of old favorite cooking apple. Crisp white flesh is tender and juicy with high flavor.

RED McINTOSH — Early coloring fruit, solid red skin, crisp and juicy with distinctive flavor. Tree is hardy and productive.

VALNUR DOUBLE RED JONATHAN — Valnur is a mutation of Jonathan. The fruit starts coloring with a stripe and fills in until the entire apple is completely covered with a beautiful deep red. Earlier and better colored than its parent, but it still has the typical Jonathan flavor and quality.

RED KING BRAUNS VARIETY DELICIOUS — U. S. Plant Patent No. 1411. See complete description on pages 6 and 7.

YELLOW DELICIOUS — Produces large golden fruit with exceptional flavor. Bears early and is a heavy bearer. Excellent pollenizer. A leading commercial variety.

BARKLEY RED ROME — U. S. Plant Patent No. 1470. See complete description on page 5.

VAN WELL RED WINESAP — See page 9 for complete description of this improved strain.

Dwarf Apple Trees (Continued)

SEMI-DWARF TREES ON EAST MALLING II ROOTSTOCK

Malling No. II large semi-dwarf mature at about two-thirds the size of standard trees. The Malling II understock has proven hardy, they develop good roots and in many ways are far superior to the standard rootstocks.

No more long ladders for picking or thinning. They bear younger, therefore produce more fruit per acre than standard trees, also the quality will be better because not so much fruit is grown in the shade. More trees, more quality fruit per acre. Horticulturists say, trees on Malling II are as stable as any standard trees you could plant.

We recommend 27'x27' planting for permanent set and 13½'x27' for volume production per acre at a very young age, or the standard 20'x20' with the intention of eliminating half the trees when they become crowded. Either way you can get good production at a young age.

APPLE VARIETIES AVAILABLE ON E. M. II (LARGE SEMI-DWARF)

and
dwarfing
rootstocks

Standard PLUMS

SANTA ROSA — Very large round plum, dark red skin, yellow flesh streaked with crimson. As a shipping plum it has few equals.

DUARTE — Large sweet plum with red flesh, sweet and juicy, good quality.

PRESIDENT — Large oblong fruit, dark blue skin with yellow flesh, heavy producer. Good commercial variety.

Dwarf PLUMS

BEAUTY — Largest of early plums, oval shape, crimson color, 10 days earlier than Santa Rosa.

PEACH PLUM — Light red skin, large round fruit, ideal for home orchard.

CLIMAX — Midseason, very high flavor, sweet, large. Fine for fresh fruit.

YELLOW EGG — Large golden color, juicy fruit, good canner, showy market variety.

SANTA ROSA — See description above.

DUARTE — See description above.

DAMSON — Small round plum, dark purple skin with yellow flesh. Fine canner.

Standard PRUNES

EARLY ITALIAN (Richards Strain) — Excellent commercial variety, 10 days to two weeks earlier than Italian. Large purple fruit and a good shipper.

EARLY ITALIAN (Milton Strain) — Excellent commercial variety recently discovered in Oregon. Ten days to two weeks earlier than Italian, large purple fruit. A good shipper.

STANLEY — Purple skin, golden flesh. Firm, excellent quality. Can be counted on to produce heavy crops every year.

ITALIAN — One of the finest prune varieties. Dark purple color, heavy bearer, good for drying and canning. Excellent shipper.

Dwarf PRUNES

SUGAR — Large and sweet, fine for canning or drying, purple color, oval shape.

DOUBLE X FRENCH (Improved Petite) — Larger than Petite, rich and sweet.

ITALIAN — See description above.

BING

CHERRIES

Our cherry trees are propagated from seed and scion sources which have been inspected and approved by the Washington State Department of Agriculture. We cooperate fully with the Washington State Nursery Improvement Program in order to provide the finest in virus-free and true to name stock for our customers. Our trees are regularly inspected both by government inspectors and by our own nurserymen who have many years of practical experience in growing fruit trees. For these reasons you can be sure of the cherry trees you order from Van Well Nursery.

SWEET CHERRIES

BLACK TARTARIAN — Black cherry, used extensively as a pollenizer.

ROYAL ANN—Yellow with red blush, good canner.

CHINOOK — A new introduction that is earlier, larger and sweeter than its parent, Bing. Mahogany-colored and from four to 10 days earlier than Bing.

RAINIER — A new introduction. Bigger, sweeter than Bing. Has pink-tinted yellow skin, clear flesh and colorless juice. Good canner, shipper.

BING — Large, black, solid, highest quality, productive. The leading commercial variety of the sweet cherries.

VAN — Recent introduction from Canada. Black cherry, excellent quality. Good pollenizer for Bing and Lambert. Hardy.

BLACK REPUBLICAN — Medium size, black, good keeper and shipper, good pollenizer.

LAMBERT — Large black commercial cherry. A good shipper, hardy and vigorous.

SOUR CHERRIES

MAY DUKE — Hardy, early, ideal for pies.

MONTMORENCY — Bears young. Fruit clear red with sweet acid flavor. One of the best sour cherries.

LATE DUKE — Sour pie cherry, ripens late July. Large dark red fruit.

DAROGA RED*

*One of Washington's Finest
Fresh Peach Varieties*

*Sold only by VAN WELL NURSERY, Trade Mark Registered

PEACHES *that produce*

"F" denotes freestone; "C" clingstone; "SC" semi-cling.
Varieties listed in order of ripening.

✓ **EARLY RED HAVEN, F** — New introduction, early ripening sport of Red Haven which ripens 14 days ahead of its parent. One of the earliest of yellow-fleshed freestone peaches. Very similar to its parent in color, size, flavor and texture. Available on standard rootstock only. U. S. Plant Patent pending. See page 19 for illustration, prices.

✓ **DIXIE RED, SC** — Early firm, yellow fleshed fruit; skin colored with beautiful over-all red blush.

✓ **RED HAVEN, F** — One of the earliest peaches with firm yellow flesh. Brilliant red skin, fine texture, and good quality have made Red Haven our top seller. It is one of the finest new peaches developed in a good many years.

GARNET, F — An outstanding new variety introduced and sold only by Van Well Nursery. See complete description at top of following page.

DAROGA RED, F — A sport of July Elberta which is very similar in all respects to Red Haven. A firm, fine textured peach, yellow flesh with highly colored red skin. Ripens about a week later than Red Haven and preferred to Red Haven by some of Washington's leading peach growers. Sold only by Van Well Nursery. Trade mark registered.

RED GLOBE, F — A new mid-season peach, attractive, highly blushed. Has firm, yellow flesh of good flavor and is adapted to distant marketing.

NEW GARNET PEACH

T.M. Reg.

A NEW mutation of Sunhigh. Discovered in East Wenatchee, Garnet is very similar to its parent except that it ripens earlier. Creamy yellow skin with light red blush. A fine canning and freezing peach. Trade mark registered and

Sold Only by VAN WELL NURSERY.

EARLIHALE, F — A very promising new variety, large, solid, good color. Claimed by leading horticulturists to be as good as J. H. Hale but two weeks earlier.

RICH HAVEN, F — About Hale Haven season, good color, large, freestone, good shipper, new variety.

EARLY ELBERTA, F — Also known as Improved Elberta. A large golden yellow peach that has excellent quality. Ideal canning fruit with rich sweet flavor. Good shipper. Ripens 8 to 10 days ahead of Elberta.

ELBERTA, F — The peach that sets the standards by which all other varieties are judged. Rich yellow color, self-pollenizing and a pollenizer for other varieties. A superior commercial canning peach, large fruit, fine shipper.

J. H. HALE, F — One of the finest commercial peaches on the market today. Produces large, round uniform fruit which has golden skin with brilliant red cheek. An excellent shipper.

RIO OSO GEM, F — Large firm peach. One of the best late varieties. Fruit is tasty sweet, rich and juicy.

Our healthy, vigorous trees are propagated right, grown right, and delivered to you in perfect growing condition.

PLANT PATENT INFORMATION

Under the United States plant patent law reproduction of patented varieties is prohibited either for sale, or for personal use except by license of the patent owner. Any unauthorized reproduction, or sale or distribution of propagating material of patented varieties is prohibited under the variety name, trade mark, or any other name or names and will subject the reproducer, seller or distributor thereof to prosecution for infringement of the United States patent laws.

ORDER NOW—These folks are glad they did.

WASHINGTON

"We picked 600 boxes of Red King® Braun's Delicious from our Red King trees this fall and they were picked and shipped by the 5th of September. They really color early."

(Signed) FARRIS JOHNSON

NASHVILLE, TENNESSEE

"I want you to know it makes me feel good to find one so honest and fair dealing as you. Your service and prices are the best. Your nursery stock fine, extra nice for the price."

BERRIEN SPRING, MICHIGAN

"I want to tell you how pleased I am with the trees I ordered from you the last two years. We have not lost one tree in the whole lot. Someone gave us six from another nursery and we lost one of the six, but none from you."

NEW BUFFALO, MICHIGAN

"Trees arrived in perfect shape—nicest trees I have seen in a long time."
